Furthermore, the pressure of saturated steam has been observed up to the critical point itself by a number of observers, of whom Cailletet and Colardeau 52 seem the most trustworthy. From their values and the extrapolation formula for L, one can compute the change of volume during vaporization up Figure 16. The steam dome on the temperature-density plane, with the straight diameter of Cailletet and Mathias, and the critical point according to Nadejdine (N), Battelli (B), Dieterici (D), and the present writer. to 320 and indeed up to the critical point itself. The sum of these values and the volumes of the liquid mentioned above are the volumes of saturated steam up to 320. The results are tabulated below and are plotted in Figure 16. The diameter is seen to be, as usual, nearly but not quite straight. It is not possible to represent the whole of it even by...
