Date :2008-8-1. Introduction This book describes the pattern recognition and artificial intelligence in some of the basic theory and some related models. including Bayesian decision making. linear discriminant function. neural network. hidden Markov models. clustering technology. combined with pattern recognition problems. such as character recognition. handwriting identification. face detection. license plate recognition. seal identification and remote sensing images. medical images processing. etc. from various angles. introduced the idea to solve these problems. Most of the problems of which the book is given based on the cvc 6.0 implementation of the code. and has some scalability. Some examples are also given a different implementation methods for readers to choose. This book can be used as the reader to learn pattern recognition and artificial intelligence at the reference. Contents: Chapter 1 Introduction 11.1 The concept of patterns and pattern recognition model space 11.2. 21.3 feature space and the type of spatial pattern recognition system consists of pre-41.3.3 31.3.2 31.3.1 access to information feature extraction and selection 41.3.4 Classification Decision 41.4 41.5 pictures of objects that identify the structure of the problem 5 in Chapter 2 of the basic decision-making pattern recognition method based on the minimum error rate of 62.1 Bayesian decision classifier design 92.2.1 62.2 multi-class situation 102.2.2 102.3 on two types of classifiers The error rate 102.4 102.5 on Bayesian decision the basic concepts of linear discriminant function design linear classifiers 112.6 main steps 122.8 122.7 Fisher linear discriminant multi-class problem to solve the basic concepts of decision tree 142.8.1 142.8.2 decision tree basic design considerations tree 15 Chapter 3 describes models and algorithms commonly used artificial neural network development...
